

## Accuratech Machining

Accuratech Machining, we are a young & dynamic company located in the suburb of Montreal, that has started in August, 2000 and our first machine was a CNC OKUMA 7 Axis Lathe from EMEC Machine Tools.

We are into machining general parts requesting high accuracy and hard materials.

Today, in 2009, we have a total of 8 OKUMA'S CNC MUTLITASK Machines, with 7 and 8 Axis lathes and Machining Centers. We also have a TSUGAMI multi Axis lathe for smaller parts.

All these machines have been purchased through the years from EMEC due to the high quality, rigidity and accuracy that we can achieve with them; also the recommendation of the right machine for our manufacturing needs by the Sales person to us, has been a great help.

Quick response and professional service from EMEC have been the key of our continuous relationship with them and the success of our Company growth.

**Patrick Gaudette**  
President
